

Task 5

Multi para 36 years old was admitted to the hospital at the first stage of childbirth with reductions in average strength by 30-35 seconds after 2-3 minutes. This is the fifth pregnancy. The history had one normal birth, two abortions, and the last pregnancy four years ago ended with a cesarean section due to the disproportion of cephalopelvicum. In the midst of one of the contractions, the woman in labor complained of "dagger" abdominal pain, weakness. BP 70/40 mm Hg, fetal heartbeat is absent. The abdomen on palpation is intense, sharply painful. The contours of the uterus are blurred.

1. Interpretation of objective / laboratory data.
2. The wording of the preliminary diagnosis is based on the identification of pathological changes.
3. The appointment of additional examination methods (laboratory or instrumental) to confirm the diagnosis.
4. Definition of the basic principles of treatment (medication or surgical) of this pathology.
