

## Task 9

A pregnant 34 years old entered the maternity hospital. Third pregnancy, full-term. Second birth. Uterine contraction began 6 hours ago. Amniotic fluid withdrew 2 hours ago. The lie of the fetus is transverse, the fetal head is on the right. The fetal heartbeat is not heard. During the vaginal examination it was established: the opening of the uterine cervix is complete, the shoulder and the handle of the fetus are determined in the vagina.

1. Interpretation of objective / laboratory data.
2. The formulation of the preliminary diagnosis based on the identification of pathological changes.
3. The appointment of additional examination methods (laboratory or instrumental) to confirm the diagnosis.
4. Definition of the basic principles of treatment (medication or surgical) of this pathology.
